

I respectfully urge you to reject NAB's petition 04-160. I pay for the services I get from XM Radio and I believe I should be able to get Traffic and Weather reports when I want them and not have to surf the channels on regular radio to find the information I want and need. To stifle technological innovation and stifle competition to protect old technology would be the act of a backward nation. As a nation, we must look to the future and promote advances of technologies that better life for its citizens.
